

Frequently Asked Questions

AI Assistant & Knowledge Base System Guide

1. Service & Account Management

1. What is your service?

We provide AI-powered assistance to help users get quick answers to their questions.

2. How do I create an account?

Click the Sign Up button, enter your details, and complete the registration process.

3. How do I log in?

Click Login and enter your registered email and password.

4. I forgot my password. What should I do?

Use the Forgot Password option on the login page to reset your password.

5. Can I use the chatbot without an account?

Depending on the application settings, some chatbot features may be available without an account.

2. Chatbot Capabilities & Usage

6. What can I ask the chatbot?

You can ask questions related to the information provided in its knowledge base.

7. How does the chatbot generate answers?

The chatbot retrieves relevant information from its knowledge base and uses an AI model to generate a response.

9. Can the chatbot answer questions outside its knowledge base?

It may try to answer, but it should indicate when the requested information is not available in its knowledge base.

10. How accurate are the chatbot's answers?

Accuracy depends on the quality and completeness of the knowledge base and the AI model.

11. Can I ask follow-up questions?

Yes. The chatbot can use the conversation context to answer related follow-up questions.

12. Does the chatbot remember previous conversations?

This depends on how the application is designed. Conversations can be stored and retrieved if chat history is implemented.

13. Can I delete my conversation history?

If the application provides this feature, you can delete conversations from your chat history.

14. Is my data stored?

Data storage depends on the application's privacy and database configuration.

15. Can I use the chatbot on mobile?

Yes, if the application has a responsive web interface or mobile application.

16. What should I do if the chatbot gives an incorrect answer?

Verify the information and report the incorrect response if a feedback/reporting feature is available.

3. Retrieval-Augmented Generation (RAG) Architecture

8. What is RAG?

RAG stands for Retrieval-Augmented Generation. It retrieves relevant information from documents or a database before generating an answer.

17. Can administrators update the chatbot's knowledge?

Yes. In a RAG-based system, administrators can add, update, or remove documents from the knowledge base.

18. What types of documents can be used for RAG?

Common sources include PDFs, text files, Word documents, web pages, FAQs, and database records.

19. How are documents prepared for RAG?

Documents are loaded, divided into smaller chunks, converted into embeddings, and stored in a vector database.

20. What happens when I ask a question?

The system converts the question into an embedding, searches for relevant information, retrieves matching content, and sends it to the AI model to generate the final answer.

21. Who am i? Or what is my name ?

Your name is bhavika and you are ex-BCA student. That's all i know.
